Operating Juniper Networks Routers in the Enterprise

THE VOLGENAU SCHOOL OF
INFORMATION TECHNOLOGY AND ENGINEERING

This course is an introductory-level, instructor-led course that focuses on installation, configuration, operational analysis, and troubleshooting considerations of Juniper Networks routers in the enterprise.

The course combines both lecture and labs, with significant time allocated for hands-on experience with J-series platforms and JUNOS software.

The primary audiences for this course are end users of J-series platforms, which include the following:

- Network engineers;
- Support personnel;
- Reseller support; and
- Others responsible for implementing Juniper Networks Enterprise Routing products.

OJRE is an introductory-level course. The OJRE prerequisite is a basic understanding of the TCP/IP protocols.

Benefits Include:

- Juniper authorized training
- Class days and times are perfect for working professionals and students
- Increased value to employers
- Provides a path to Juniper certification
- Learning spaced over 6-week time frame
