

BODE PLOTS : QUICK METHOD FOR SKETCHING FREQUENCY RESPONSE MAGNITUDE AND PHASE

- METHOD :
- ① FACTOR NUMERATOR + DENOMINATOR OF $H(j\omega)$
 - ② SKETCH ASYMPTOTES FOR EACH ZERO + POLE TERM
 - ③ ADD THEM UP!

BASIC FORMS

$20 \log_{10} |H(j\omega)|$
MAGNITUDE

$\angle H(j\omega)$
PHASE

K : CONSTANT

$j\omega$ ZERO AT ORIGIN

$1/j\omega$ POLE AT ORIGIN

$H(j\omega) = 1 + \frac{j\omega}{\omega_0}$ ZERO AT ω_0

$1/(1 + \frac{j\omega}{\omega_0})$ POLE AT ω_0

$1 + 2j\zeta(\frac{\omega}{\omega_N}) + (\frac{j\omega}{\omega_N})^2$

$1/(1 + 2j\zeta(\frac{\omega}{\omega_N}) + (\frac{j\omega}{\omega_N})^2)$
